Job description

Clarity develops **Software as a Service** (SaaS) solutions to help investors and asset managers understand and optimize the **social impact of their investment portfolios**, without having to compromise on return or risk.

Clarity aims to become the "**gold standard**" and **leader tech provider of social impact solutions** for all society stakeholders (investors, consumers, governments, etc.), by estimating needs of the population "bottom up" and rating all kind of companies, organizations and governments using Big Data & AI algorithms.

Clarity's main differential elements include:

- **A Disruptive Social Impact Methodology**
  Clarity uses a proprietary methodology with a disruptive and objective way of measuring social impact (bottom-up based on big data and machine learning algorithms). Clarity has redefined what "social impact" means, measuring not only how companies behave but also the impact created by their product, services and operations.

- **An innovative product and technology**
  The company is focused on developing an innovative product, as SaaS, and leverages different technologies (artificial intelligence platform, advanced UX and visualizations).

- **A flexible business model**
  Clarity has a flexible business model operating both B2B and B2B2C, with different pricing structures and commercial approach.

- **A top talented team with business, entrepreneurial and research background**
  People is one of Clarity's main assets. The team comprises professionals from leading consulting and banking firms, MBA graduates from top business schools, entrepreneurs and researches and PhDs. Some examples:
  - o Rebeca Minguela (founder and CEO)- Young Global Leader from the World Economic Forum, MBA from Harvard Business School, founder of Clarity and Blink Booking (sold to Groupon), professional experience in management consulting (BCG), private equity (Bain Capital), Groupon (Senior Director of Product and Ops) and Santander (Global Head of Digital Transformation).
  - o Moisés García. Experience in management consulting (BCG) and banking (Deloitte Corporate Finance) and MBA from INSEAD.
  - o Antonio Molin. Data scientist at Netflix and Miroculus (Silicon Valley startup).
  - o Jorge Gonzalo. Serial entrepreneur. Professor and researcher at UPM.

Role description

Clarity is looking for an intern to join the team in Madrid during the 2017 summer (dates to be negotiated according to the candidate and the firm's needs). Main responsibilities will include:

- Engage in business development and business model definition.
- Negotiate with Data Providers.
- Support market analysis and research on specific areas to measure companies' social impact (e.g. environmental impact, social impact covering population's needs, etc.).
- Provide support in Clarity's financial and operations management.

Required skills and knowledge

- Studies: Economics, Business Administration, Engineering, Physics, Math.
- English fluency.
- Strong analytical skills.
- Creativity and intellectual curiosity.
- Interest in social ventures.
- User level of basic Microsoft tools (excel, power point, word).
- Experience using statistical programs (e.g. R or Python or other statistical package) would be a plus.

Working conditions

- Flexible duration (ideally at least 2 months) and starting date (ideally July 2017).
- Ideally Full-Time (but open to part-time options).
- Option to extend the internship during the full 2017-2018 academic course based on performance, and potentially full-time offer after graduation.
- Access to Clarity's management team and coaching/feedback during the internship.
- Ability to join the team immediately and work from Clarity office in Madrid, with an option to work from the NY office depending on internship role.
- Competitive compensation.
