* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

3. Skills and learning outcomes *

3.1. Skills to be learned

CB06 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB07 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB09 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo

CE01 - Analizar y aplicar técnicas para el diseño y desarrollo avanzado de equipos y sistemas, basándose en la teoría de la señal y las comunicaciones, en un entorno internacional
3.2. Learning outcomes

RA42 - knowledge on Big Data technologies and their application to multimedia content

RA41 - Ability to select and apply adequate machine learning techniques to large-scale multimedia datasets and evaluate their performance

RA34 - Capability to develop and evaluate machine-learning techniques and to design big data learning systems

RA43 - Ability to develop basic applications in relevant current use cases in the media industry (media search, content recommendation, etc.)

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

4. Brief description of the subject and syllabus

4.1. Brief description of the subject

Current data analysis applications require the management of extremely large collections of heterogeneous multimedia data. The extraction of knowledge from these huge datasets is a difficult problem with a broad scope.

This subject aims at presenting the most relevant techniques and methodologies for large scale multimedia analysis.

In particular, we will discuss the application of widely used machine learning techniques (dimensionality reduction, classification, clustering) to textual, image and spatio-temporal data. Heterogeneous information networks and suitable data mining techniques will also be described.

Big data technologies will be introduced, including efficient acquisition, storage and processing of huge amounts of
heterogeneous data. Some of the described techniques will be applied to relevant use cases, such as content search, summarization, content recommendation...

Practical sessions will be proposed in which students will apply these tools to real datasets and become familiar with powerful analysis frameworks.

4.2. Syllabus

1. Exploratory Data Analysis
   1.1. Analytic graphics
   1.2. Techniques for exploratory data analysis
   1.3. Data transformation and dimensionality reduction
   1.4. Clustering and outliers detection
   1.5. Lab session: EDA applied to a dataset

2. Image and Audio Feature Extraction
   2.1. Introduction to image descriptors
   2.2. Histograms, color and luminosity
   2.3. Texture descriptors
   2.4. Spatio-Temporal descriptors
   2.5. Image/Video Movement
   2.6. Audio Signal
   2.7. Audio descriptors
   2.8. Lab session: Image/audio search and classification

3. Recommender Systems
   3.1. Simple recommenders
   3.2. Simple recommenders
   3.3. Content-based recommenders
3.4. Collaborative filtering
3.5. Hybrid recommenders
3.6. Lab session: Simple, content-based and collaborative filtering recommenders

4. Text analysis
   4.1. Text mining
   4.2. Vector space models
   4.3. Natural Language Processing
   4.4. Text indexing and search
   4.5. Keywords extraction and summarization
   4.6. Text clustering, classification and recommendation
   4.7. Lab session: Text analytics

5. Machine/Deep Learning Applications with multimedia content
   5.1. Difference between machine/deep learning in previous applications
   5.2. Feature engineering
   5.3. Machine/Deep learning projects
   5.4. Real world applications

6. Project development in pairs (application of ML tools to a real dataset)
   6.1. Project guidance
   6.2. Project results and presentation
### 5. Schedule

#### 5.1. Subject schedule*

</table>

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The schedule is based on an a priori planning of the subject; it might be modified during the academic year, especially considering the COVID19 evolution.
6. Activities and assessment criteria

6.1. Assessment activities

6.1.1. Continuous assessment

6.1.3. Referred (re-sit) examination
6.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must complete the Moodle task entitled "Renounce to continuous evaluation" before the end of the 4th week after the subject start (deadline will be announced in Moodle).

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination will be carried out exclusively by the final assessment method.

The continuous evaluation will be based on the following elements:

- Attend and follow the theory and practical sessions and hand in a report for each lab session
- Develop a final project in pairs and present the results to the classroom. This activity includes the reading and extracting of the main ideas from relevant papers in the field. Project will include a report and the performance of a presentation to the group (15 minutes plus 5 minutes discussion) by each pair of students.
- Individual exam: questions on the theoretical content of the course, selected papers and code.
All parts are required to pass the subject.

The weight of such activities, all mandatory are:

- Lab sessions (individual) 25% - minimal threshold 4/10
- Project (pairs) 35% - minimal threshold 4/10
- Exam [Test / Short questions] (individually) 40% - with a minimal threshold of 4/10 in the total mark of the exam

Considering the nature of the subject all students are encouraged to follow the evaluation procedure described above.

In case of students not taking the option of "continuous assessment" they should carry out only a final exam (weight 100% of the final mark); nevertheless, the student should bring the results from the lab sessions and project to the final (global) exam.

Extraordinary examination will be carried out exclusively by the final assessment method, with the same method and conditions as indicated for students not following the "continuous assessment". Besides bringing the results from the lab sessions and project, the exam will include questions on the lab sessions reports, questions on the project results and test/short questions on the theoretical aspects of the subject.
7. Teaching resources

7.1. Teaching resources for the subject

<table>
<thead>
<tr>

</thead>
</table>
8. Other information

8.1. Other information about the subject

In this subject we align with the Sustainable Development Goals (SDG) 4, 5 and 9.

Especially this subject will support in the activities to be carried out:

4.4 By 2030, substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship

5.B Enhance the use of enabling technology, in particular information and communications technology, to promote the empowerment of women

9.5 Enhance scientific research, upgrade the technological capabilities of industrial sectors in all countries, in particular developing countries, including, by 2030, encouraging innovation and substantially increasing the number of research and development workers per 1 million people and public and private research and development spending
