1. Description

1.1. Subject details

Name of the subject	93000971 - Medical Data Intelligent Analysis
No of credits	3 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 1
Tuition period	September-January
Tuition languages	English
Degree programme	09AU - Master Universitario en Ingeniería Biomedica
Centre	09 - Escuela Técnica Superior de Ingenieros de Telecomunicacion
Academic year	2020-21

2. Faculty

2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Gema Garcia Saez (Subject coordinator)	B302.2	gema.garcia.saez@upm.es	Th - 12:00 - 14:00 It is necessary first to schedule an appointment via email.

* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

2.3. External faculty

Name and surname	Email	Institution
Ernestina Menasalvas Ruiz	ernestina.menasalvas@upm.es	ETS de Ingenieros informáticos
Alejandro Rodríguez González	alejandro.rg@upm.es	CTB
Antonio Jesús Díaz Honrubia	antoniojesus.diaz@upm.es	ETS Ing Informáticos

3. Skills and learning outcomes *

3.1. Skills to be learned

CB06 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB07 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB08 - Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicios

CB09 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo.

CE-MIB01 - Utilizar el lenguaje especializado empleado en entornos biomédicos y los fundamentos de las ciencias biomédicas para su aplicación en la resolución de problemas médicos de la Ingeniería Biomédica.

CE-MIB03 - Ser capaz de aplicar los métodos y tecnologías actuales en investigación biomédica aplicadas en la prevención, diagnóstico y tratamiento de enfermedades.

CG-MIB01 - Resolver problemas e integrar conocimiento en temas nuevos o escasamente definidos y en entornos multidisciplinares del área de la Ingeniería Biomédica

CG-MIB02 - Analizar y aplicar la reglamentación correspondiente a la sensibilidad social y ética en los ámbitos de operación que pueden darse en Ingeniería Biomédica

CG-MIB03 - Utilizar la filosofía, el método científico y el método experimental para la búsqueda de innovación, la curiosidad científica y el desarrollo de actitudes creativas

CG-MIB04 - Utilizar las tecnologías de la información y la comunicación para la búsqueda de información, datos bibliográficos y adquisición de nuevo conocimiento para la formación permanente y el trabajo autónomo

CG-MIB05 - Utilizar técnicas de expresión oral y escrita para comunicar trabajos y conclusiones a comunidades de iguales o divulgación científica, elaboración de artículos, manuales de estilo y herramientas de edición para fomentar la capacidad de comunicación y diseminación de resultados

CG-MIB06 - Aplicar técnicas de trabajo colaborativo en equipos multidisciplinares internacionales y liderazgo, así como utilizar métodos para asumir la responsabilidad de orientar y dirigir trabajos científicos en el ámbito de la ingeniería Biomédica

CG-MIB07 - Utilizar la lengua inglesa como herramienta de trabajo

3.2. Learning outcomes

RA72 - Apply methods and algorithms appropriate for intelligent analysis of medical data

RA73 - Deal with different data sources and structured/unstructured data

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

4. Brief description of the subject and syllabus

4.1. Brief description of the subject

The main goal is to learn the most appropriate methods and algorithms to be used in intelligent analysis of medical data.

Secondary objectives are:

- To learn artificial machine learning algorithms, which can be applied to specific medical problems such as monitoring, diagnosis, prediction or treatment adjustment.
- To learn how to deal with different data sources and structured/unstructured data.
- To learn visual data analytics methods and tools.
- To learn software tools to use big data analysis in practice.

4.2. Syllabus

1. Characteristics of medical knowledge and clinical data. Knowledge management and medical reasoning processes
2. Advanced visualization of health data. Design of visual data analytics applications. Interactive techniques.
3. Machine learning algorithms applied to medical data. Types of problems. Features selection and pre-processing algorithms. Classification, estimation, clustering, association. Evaluation methods. Software tools.
4. Big data in health. Selection of data sources. Tools to analyse massive data: Mahout, Spark

5. Schedule

5.1. Subject schedule*

Week	Face-to-face classroom activities	Face-to-face laboratory activities	Distant / On-line	Assessment activities

6.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must send an email via Moodle to the coordinator before two weeks from the beginning of the course.

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Continuous assessment

In order to pass the course, students have to deliver the requested material about the 3 practical works and obtain a minimum score of 4/10 in each of them. Passing score for the whole course is 5/10. Delays in handing in of deliverables will be penalised by 20%. Students who do not reach the passing score via continuous assessment will be able to do so in the extraordinary examination.

Extraordinary examination will be carried out exclusively by the final examination method.

Depending on the total number of students, and the pandemic evolution, it might be necessary to reduce face-to-face classes. In case it is necessary, attendance will be organized considering the available resources and sanitary requirements

8. Other information

8.1. Other information about the subject

The Sustainable Development Goals are the blueprint to achieve a better and more sustainable future for all. This course is related to SDG 3 and 4, specifically to points:

- 3.D Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.

- 4.4 By 2030, substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship
